DETAILED ACTION

Response to Amendment

1. When the claim limitation of “communication circuitry” was read broadly, it was recognized prior art exists that reads on the previously allowable subject matter, hence a new grounds of rejection is established in the subsequent paragraphs.

Claim Rejections - 35 USC § 102

2. Claims 2-8, 10, 11, 15-17, 19, 20 and 22-25 are rejected under 35 U.S.C. 102(e) as being anticipated by Haubrich (US 6379300). Haubrich discloses and implanted device (10) with an enclosure (12) and header, antenna (20a), a diplexer (26, 30, 32, 34), an RF transceiver (24), feedthroughs (22) and pacing/ sensing circuitry (28). The enclosure (12) is read as the first chamber and the header is read as the second chamber, the second chamber containing communication circuitry, an antenna and diplexer. The antenna is read as a transceiver since, as part of the transceiver, it is used for both reception and transmission (figure 2; col. 2 @ 47 – col. 3 @ 23; col. 3 @ 46 – col. 4 @ 24). US 5697958 to Paul et al. is incorporated by reference (col. 1 @ 22-31) to teach the antenna in the header (abstract). US 5861019 to Sun et al. is incorporated by reference (col. 1 @ 22-31) to teach the antenna integrated into the casing (abstract).

Claim Rejections - 35 USC § 103

3. Claims 9, 18 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Haubrich (US 6379300) in view of Bardy (US 6312378). As discussed in paragraph 2 of this

Art Unit: 3762

action, Haubrich discloses the claimed invention except for the implanted device being linked to a computing network.

Bardy teaches data management using a computing system (14, 15, 16, 17) connected to an implantable device (12) for the purpose of automatically collecting and analyzing patient information. It would have been obvious to one having ordinary skill in the art at the time of the invention to have used a computing system connected to an implantable device in the Haubrich system in order to enable remote patient care so trends in the patient's condition can be recognized and a determination made regarding the need for intervention (figure 1; col. 1 @ 8-12; col. 2 @ 41-49).

4. Claims 12 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Haubrich (US 6379300) in view of Ware (US 4314562). As discussed in paragraph 2 of this action, Haubrich discloses the claimed invention except for the second chamber being encompassed in the first chamber.

Ware teaches implantable system enclosures using chambers (cups with covers) for the purpose of electrically isolating system components. Absent any teaching of criticality or unexpected results, it would have been obvious to enclose the diplexer within a second chamber that is encompassed in the first chamber as a mere substitute of known functionally equivalent housing structures (figures 1, 9; col. 3 @ 6-9).

Allowable Subject Matter

5. Claims 13 and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Statutory Basis

6. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
